It in a single of my personal favorite publication. It usually fails to charge an excessive amount of. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Book Condition: New. Publisher/Verlag: Springer, Berlin | Principles and Applications | Surface science has existed as a recognized discipline for more than 20 years. During this period, the subject has expanded in two important ways. On the one hand, the techniques available for studying surfaces, both experimental and theoretical, have grown in number and in sophistication. On the other hand, surface science has been applied to an increasing number of areas of technology, such as catalysis, semiconductor processing, new materials development, corrosion prevention, adhesion and tribology. . There is, however, no sharp division between fundamental and applied surface science. New techniques can immediately be applied to technologically important problems. Improvements in understanding of fundamental phenomena such as epitaxial growth of one metal on another, or the bonding of hydrocarbons to metal surfaces, to name just two examples, have direct consequences for technology. Surface science has also become very much an interdisciplinary subject; physics, chemistry, materials science, chemical and electrical engineering all draw upon and contribute to surface science. The intimate relationship between principles and applications of surface science forms the theme of this proceedings volume. The contributions were all presented as invited lectures at an Australian-German Workshop on Surface Science held at Coogee Beach, Sydney, Australia, in December 1991. The contributors, all active surface scientists in their respective countries, were asked to highlight recent developments in their own areas of activity involving new techniques, advances in fundamental understanding or new applications in technology. | I Surface Science Techniques.- Scanning Tunneling Microscopy on Clean and Adsorbate-Covered Semiconductor and Metal Surfaces.- Photoelectron Holography: A Status Report.- Studies of Surface Composition and Structure Using Low-Energy Ion Scattering and SIMS.- Heavy-Ion Rutherford Backscattering Spectrometry.- Auger Photoelectron Coincidence Spectroscopy of Transition Metals.- Second-Harmonic Generation Applied to the Formation of Ultrathin...
